

# Bone Scan

A bone scan is a test that uses a very small amount of radioactive contrast. This medicine lets your doctor see your bones better than he or she would be able to on x-ray.

This test has two parts. **Arrive on time for each part of the test.** Arrive for the first part of the test at \_\_\_\_\_ am / pm on \_\_\_\_\_. Staff will tell you when to come back to the testing area for the second part of the test.

**If you have any allergies to medicines, foods or other things, tell the staff before the test.**

**If you are breastfeeding, pregnant or think you might be, tell the staff before the test.**

## During the Test

### **Part One:**

An IV (intravenous) is put in a vein in your arm. The contrast is put into your IV. One or two scans may be done. Lie flat and hold still as each scan is done.

### **Part Two:**

About 3 hours later, you will have a scan of your whole body. You lie on a table during the scan. This takes about 1 hour.

# 골 스캔 (Bone Scan)

골 스캔(bone scan)은 소량의 방사선 조영제를 사용하는 검사입니다. 이 약물은 의사가 엑스레이를 통해서 볼 수 있는 것보다 훨씬 낮게 뼈를 볼 수 있게 해줍니다.

이 검사는 2 단계로 구성되었습니다. 각 검사를 받을 때 제 시간에 도착하십시오. 1 단계 검사를 위해서 \_\_\_\_ 일 \_\_\_\_ (오전/오후)까지 병원에 도착하셔야 합니다. 병원직원은 검사가 필요한 부분의 2 단계 검사를 위한 다음 일정을 알려주게 됩니다.

약이나 음식 또는 어떤 물질에 알레르기가 있으면 검사 전에 의료진에게 미리 알려주십시오.

수유 중이거나, 임신했거나 임신 가능성이 있으면 검사 전에 의료진에게 말씀하십시오.

## 검사 중

### 1 단계:

IV (정맥주사)를 팔뚝 정맥을 통해 놓습니다. 조영제를 IV에 넣습니다. 스캔을 한 번이나 두 번합니다. 스캔을 하는 동안 등을 대고 들어누워 움직이지 말아야 합니다.

### 2 단계:

약 3 시간 후, 몸 전체 스캔이 있게 됩니다. 스캔하는 동안 테이블에 눕습니다.. 이 검사는 약 1 시간 걸립니다.

## **After the Test**

- Drink plenty of liquids the day of the test. This helps your body get rid of the contrast.
- Test results are sent to your doctor. Your doctor will share the results with you.

**Talk to your doctor or nurse if you have any questions or concerns.**

## 검사 후

- 검사일에 물을 충분히 섭취하십시오. 이것은 몸이 조영제를 제거하도록 도와줍니다.
- 검사 결과는 의사에게 보낼 것입니다. 의사가 결과를 환자와 상의할 것입니다.

질문이나 문제가 있으면 의사나 간호원과 상의하십시오.
