

Bone Scan

A bone scan is a test that uses a very small amount of radioactive contrast. This medicine lets your doctor see your bones better than he or she would be able to on x-ray.

This test has two parts. **Arrive on time for each part of the test.** Arrive for the first part of the test at _____ am / pm on _____. Staff will tell you when to come back to the testing area for the second part of the test.

If you have any allergies to medicines, foods or other things, tell the staff before the test.

If you are breastfeeding, pregnant or think you might be, tell the staff before the test.

During the Test

Part One:

An IV (intravenous) is put in a vein in your arm. The contrast is put into your IV. One or two scans may be done. Lie flat and hold still as each scan is done.

Part Two:

About 3 hours later, you will have a scan of your whole body. You lie on a table during the scan. This takes about 1 hour.

骨扫描

骨扫描是使用很少量的放射性对比剂进行的测试。通过使用放射性对比剂，医生可以更清晰地观察您的骨头，效果好于 X 射线检查。

此测试有两部分。**每一部分的测试都请准时到达。**请在_____日上午/下午_____点前来接受第一部分测试。工作人员会告诉您什么时候回测试区接受第二部分的测试。

如果您对药物、食物或其他东西有任何过敏，请在测试前告知医疗人员。

如果您哺乳、已怀孕或认为您可能会怀孕，请在测试前告知工作人员。

测试期间

第一部分：

在您手臂的静脉中作 IV (静脉注射)。对比剂放于 IV 中。可能要做一次或两次扫描。做每一部分扫描时请平躺并保持不动

第二部分：

大约 3 小时之后，您要做全身扫描。扫描期间您躺在一张台子上。这约需 1 个小时。

After the Test

- Drink plenty of liquids the day of the test. This helps your body get rid of the contrast.
- Test results are sent to your doctor. Your doctor will share the results with you.

Talk to your doctor or nurse if you have any questions or concerns.

测试之后

- 测试当天喝大量液体，这有助于将对对比剂排出体外。
- 测试结果会送给您的医生。您的医生会告知您结果。

如有任何疑问或关注事宜，请告知您的医生或护士。
