Bone Scan

A bone scan is a test that uses a very small amount of radioactive contrast. This medicine lets your doctor see your bones better than he or she would be able to on x-ray.

This test has two parts. **Arrive on time for each part of the test.** Arrive for the first part of the test at _____ am / pm on __________________. Staff will tell you when to come back to the testing area for the second part of the test.

**If you have any allergies to medicines, foods or other things,** tell the staff before the test.

**If you are breastfeeding, pregnant or think you might be,** tell the staff before the test.

**During the Test**

**Part One:**

An IV (intravenous) is put in a vein in your arm. The contrast is put into your IV. One or two scans may be done. Lie flat and hold still as each scan is done.

**Part Two:**

About 3 hours later, you will have a scan of your whole body. You lie on a table during the scan. This takes about 1 hour.

**After the Test**

- Drink plenty of liquids the day of the test. This helps your body get rid of the contrast.
- Test results are sent to your doctor. Your doctor will share the results with you.
骨骼掃描

骨骼掃描是一種檢查，使用微量的放射性造影劑。與 X 光照片相比，使用放射性造影劑可以讓醫生對骨骼的觀察更為清晰。

骨骼掃描檢查分兩個部份進行。準時前來參加檢查的每個部份。檢查的第一部份安排在________上午/下午______進行。工作人員會告訴您何時返回檢查區進行檢查第二部份。

如您對藥物、食物或其他物品過敏，請在檢查前向工作人員說明。

如您正在哺乳、已懷孕或認為自己已懷孕，請在檢查前向工作人員說明。

檢查過程中

第一部份：

在手臂的靜脈上安放 IV (靜脈輸液管)，經由輸液管送入造影劑。可進行一次或兩次掃描。每次掃描時，平躺靜臥。

第二部份：

大約 3 小時後進行全身掃描。掃描進行中，要躺在掃描台上。全身掃描約須 1 個小時。

檢查後

• 檢查後當天飲用大量的液體，這有助於身體排出造影劑。
• 檢查結果將送交您的主治醫生。主治醫生會轉告您。
