Getting Your Skin Ready for Surgery

You are scheduled to have surgery. To decrease your risk of infection, you will need to get your skin as free of germs as possible. You can reduce the number of germs on your skin by carefully washing with a special soap called chlorhexidine gluconate (CHG) before surgery.

Follow These Instructions

• You may be given or you will need to buy CHG soap. You will need a 4-ounce (118-milliliter) bottle or larger. The soap is sold under the brand name Hibiclens, or there may be a store brand that costs less. Ask the pharmacist where to find it in the drug store. It is often with first aid supplies.

• Do not shave the site where your doctor will be making the cut for your surgery for 48 to 72 hours before surgery.

• You need to shower with CHG soap two times before your surgery:
  - The day before your surgery
  - Again, the morning of your surgery

Cleaning Your Skin with CHG Soap

1. Start by washing your hair with your normal shampoo and wash your body with regular soap. Rinse your hair and body well to remove any shampoo or soap that might be on your skin.
