

Modified Barium Swallow

A modified barium swallow is a motion picture x-ray that looks for swallowing problems in your mouth and throat. The test checks what types of foods and liquids are safe for you to swallow.

If you are breastfeeding, pregnant, or think you might be, tell the staff before the x-ray is taken.

Arrive on time for your test. Plan on being here for about 1 hour. The test takes about 15 to 30 minutes.

During the Test

- In the x-ray room, you sit in a chair.
- You are given different foods and liquids to chew and swallow. The food is covered with barium. Barium lets the food and drink you are swallowing be seen on x-ray.
- You may be asked to turn your head, sit back, hold your breath, cough or take small bites during the test.
